

MEASURING AND REPORTING STUDENT ACADEMIC ACHIEVEMENT

It is the mission of the Marathon City School District that all students achieve optimal learning based on high expectations and in consideration of their abilities and needs. The Board recognizes that students have diverse capabilities and interests and individual patterns of growth and learning. Therefore, the Board believes it is important that teachers and other professional staff have as much accurate knowledge of each student as is possible through observations of students' intelligence, including written tests, oral recitation and other achievement indicators, knowledge of student work habits and study skills and abilities and understanding of the home environment. The Board further recognizes that honest and continual communication between the parent/guardian and teacher(s) is necessary for the success of the student.
